Homepage Content

The homepage is your first impression and your most powerful conversion tool. Every section below is structured to move visitors from curiosity to action.

HERO SECTION

Primary Headline (H1)

Rank Everywhere. Convert Anyone. Automate Everything.

Sub-Headline

We help local service businesses dominate search results, get recommended by AI assistants, and capture leads 24/7 — with smart websites and intelligent chatbots built for growth.

VALUE PROPOSITION STRIP

Below the hero, display 5 short value chips:

- ◆ **Local Search Dominance** — Rank #1 in your city on Google — and stay there.
- ◆ **AI Visibility (GEO)** — Get recommended by ChatGPT, Gemini & Perplexity.
- ◆ **Answer Engine Wins (AEO)** — Own the featured snippet. Be the answer.
- ◆ **Websites That Convert** — Not just beautiful — built to turn clicks into bookings.
- ◆ **24/7 AI Lead Capture** — Your smartest salesperson, always on, never tired.

SERVICES OVERVIEW SECTION

Section Headline: **"Everything Your Business Needs to Win Online"**

Section Sub-copy: Most digital agencies give you one piece of the puzzle. We give you the whole board — from how you rank on Google to what an AI says when someone asks for a recommendation to a bot that books your appointments while you sleep.

SEO — Search Engine Optimisation

We get your business to page 1 on Google for the searches that actually bring in customers. Technical fixes, on-page optimisation, local SEO, citations, and content — all handled.

GEO — Generative Engine Optimisation

The next frontier. We make sure that when someone asks ChatGPT, Gemini, or Perplexity for a recommendation in your category, your name comes up.

AEO — Answer Engine Optimisation

We position your content to win featured snippets and voice search results — so your business is the first answer people see, before they even click.

Website Creation

Clean, fast, mobile-first websites built with SEO and conversion baked in from day one. No templates. No fluff. Just a digital storefront that works hard.

AI Chatbot Infrastructure

Intelligent bots that answer every question, qualify every lead, and book every appointment — on your website and WhatsApp, around the clock.

OUR PROCESS SECTION

Section Headline: "From Invisible to Unstoppable in 4 Steps"

- 1. Discovery & Audit** — We dig into your business, your competitors, and your current digital footprint. You get a clear picture of where you stand and exactly what needs to change.
- 2. Strategy & Build** — We create a custom roadmap for your goals and budget, then build everything — website, SEO foundation, chatbot, schema, GEO content architecture — in one cohesive sprint.
- 3. Launch & Optimise** — Everything goes live with full testing, analytics, and tracking in place. We watch the numbers closely and make quick adjustments in the first 30 days.
- 4. Scale & Report** — Monthly reports show you exactly what's moving, what's working, and what's next. We grow together — as your results improve, we layer in new channels and strategies.

WHY CHOOSE US SECTION

Section Headline: "We're Not Your Average Agency"

Specialists, Not Generalists

We exclusively serve local service businesses. We know your customers, your competitors, and the exact digital levers that move the needle for studios, schools, and service providers.

The GEO Advantage

We're one of the first agencies in India offering true Generative Engine Optimisation. While your competitors are still chasing page 1 on Google, we're making sure AI recommends you.

AI-First Infrastructure

We don't just talk about AI — we build it into your business. Our chatbot stack uses real AI (not simple decision trees) to deliver conversations that feel human.

Radical Transparency

No vague reports. No vanity metrics. Every month you get clear data on rankings, AI visibility, leads captured, and bookings made — tied directly to revenue.

Homepage Bottom CTA Section

CTA Headline

Ready to Rank, Be Recommended, and Never Miss a Lead Again?

CTA Sub-copy

Book a free 30-minute discovery call. We'll audit your current digital presence, show you what your competitors are doing that you're not, and give you a clear action plan — no strings attached.

Book My Free Audit →

About Us Page

Build trust and connection. The about page is where potential clients decide if they like and believe in the people behind the agency.

PAGE HEADLINE

Headline (H1)

We Started This Because We Saw the Problem Every Day.

OUR STORY

We watched too many exceptional local businesses struggle online — not because their services weren't world-class, but because the digital world is complex, fast-moving, and brutally unfair to those who can't afford a big agency retainer.

A pottery studio with a ten-year wait list had a website that hadn't been updated since 2018. A dance school with a phenomenal reputation was invisible on Google in their own city. An art studio ran the best classes in their neighbourhood — and had no idea that AI assistants were being asked about them and giving out a competitor's name.

We built [Your Agency Name] to fix exactly this. We are a lean team of digital strategists, developers, and AI specialists who do one thing extremely well: help local service businesses show up, stand out, and consistently convert online.

We don't take on every type of client. We go deep in our niche. That means we know your market, we've solved your specific problems before, and we move faster because we're not learning on the job.

MISSION & VISION

Our Mission

To make enterprise-grade digital strategy accessible, affordable, and genuinely effective for local service businesses — without the enterprise price tag or the corporate runaround.

Our Vision

A world where every great local business — the pottery teacher with 20 years of experience, the dance school that changes young lives, the art studio that is the heartbeat of its community — is easy to find, trusted online, and growing steadily.

OUR VALUES

Results Over Optics

We don't care about impressive-looking reports with vanity metrics. We care about one thing: are you getting more leads, bookings, and revenue because of our work? If the answer is yes, we're doing our job.

Radical Transparency

You will always know exactly what we're doing, why we're doing it, and what it's producing. No jargon. No mystery. Just clear, honest communication every step of the way.

AI-Augmented, Human-Led

We use AI to move faster, test smarter, and deliver better results — but every strategy is guided by experienced humans who understand your specific business context and goals.

Partnership, Not Vendor Relationship

We treat every client as a long-term partner, not a monthly invoice. When you win, we win. We only succeed if you do, so your growth is genuinely our priority.

WHY WE'RE DIFFERENT (Key Differentiators)

- We only work with local service businesses — deep specialisation beats breadth every time.

- We offer GEO (Generative Engine Optimisation) — most agencies haven't even heard of it yet.
- Our AI chatbot stack uses real language models (Claude API), not flowchart-style bots.
- We combine SEO, GEO, AEO, web design, and chatbots into one cohesive digital system.
- Cold email + outbound is in our DNA — so we know how to write messaging that actually converts.
- We operate lean, which means lower overhead and better value passed directly to you.

Search Engine Optimisation (SEO)

The foundational layer of your digital presence. SEO determines whether your ideal customers can find you when they're actively looking.

Page Headline (H1)

Dominate Google. Own Your Local Market.

Hero Sub-copy

When someone in your city searches for what you offer, you should be the first name they see. Our SEO service makes that happen — and keeps it that way.

WHAT IS SEO?

Search Engine Optimisation (SEO) is the process of improving your website's visibility on search engines like Google so that potential customers find you organically — without paid ads. When someone searches "pottery classes near me" or "dance school in [your city]", SEO determines whether your business appears at the top or gets buried on page 4.

For local service businesses, SEO is the single highest-ROI digital investment available. Unlike paid ads, the traffic you earn through SEO doesn't disappear the moment you stop spending. Organic rankings compound over time, and the leads they generate are among the highest-quality you can get — people actively searching for exactly what you provide.

The Local SEO Problem

Most local service businesses are effectively invisible online. They have websites that no one visits, Google Business Profiles that haven't been updated in years, and established competitors ranking above them who offer inferior services. SEO is how you close that gap — permanently.

OUR SEO APPROACH

We run a five-pillar SEO programme designed specifically for local service businesses. Every pillar works together to build a sustainable, compounding flow of organic traffic.

Pillar 1 — Technical SEO

Before anything else, your website needs a solid technical foundation. A slow, broken, or poorly structured site undermines everything else you do.

- Full technical audit — crawl errors, broken links, redirect chains, duplicate content
- Core Web Vitals optimisation (LCP, CLS, FID) — targeting 90+ on Google PageSpeed
- Mobile-first indexing compliance check and fixes
- XML sitemap generation and submission
- Robots.txt optimisation
- Canonical tag implementation to prevent duplicate content issues
- Structured data / schema markup across all key page types
- HTTPS security verification and mixed-content resolution

Pillar 2 — On-Page SEO

On-page SEO ensures that every page on your site communicates clearly to Google what it is, who it is for, and why it should rank.

- In-depth keyword research targeting high-intent local searches
- Keyword-to-page mapping — every page has a clear, defined purpose and target
- Title tag and meta description optimisation across all pages
- Header hierarchy (H1–H4) structured for both SEO and readability
- Content gap analysis — identifying topics your competitors rank for that you don't
- Internal linking architecture to distribute authority across the site
- Image alt text, file naming, and compression for SEO and speed
- URL structure optimisation — clean, descriptive, keyword-rich slugs

Pillar 3 — Local SEO

Local SEO is where most of the high-intent traffic lives for service businesses. These are searches with clear location intent and strong buying signals.

- Google Business Profile (GBP) full optimisation — every field, every category, every photo
- GBP weekly posting and Q&A; management

- Citation building across 80+ local directories (Justdial, Sulekha, IndiaMart, etc.)
- Citation consistency audit — ensuring NAP is identical across all platforms
- Review generation strategy — process to systematically earn 5-star reviews
- Review response management (we respond to all reviews on your behalf)
- LocalBusiness and Service schema markup implementation
- Neighbourhood and city-specific landing pages for multi-area coverage
- Near-me keyword targeting and hyperlocal content strategy

Pillar 4 — Off-Page SEO & Authority Building

Google doesn't just look at your website — it looks at what the rest of the web says about you.

Off-page SEO builds the authority signals that push your rankings higher.

- Local backlink acquisition — relevant, high-DA links from local publications and directories
- Digital PR outreach — getting your business featured in local media and industry blogs
- Guest posting on relevant niche platforms
- Social signal management and brand mention monitoring
- Competitor backlink analysis and gap exploitation
- Disavow file management (removing toxic links that harm rankings)

Pillar 5 — Content Strategy & Creation

Content is the fuel that powers SEO. The right content targets the right keywords, answers real customer questions, and builds the topical authority that Google rewards with top rankings.

- 2–4 blog posts per month targeting high-intent informational keywords
- FAQ pages built from real customer search queries and People Also Ask data
- Service pages structured for both conversion and search ranking
- Location pages targeting nearby cities and neighbourhoods
- Content refresh programme — updating older pages to maintain and improve rankings
- Seasonal content calendar for timely ranking opportunities

WHAT YOU GET EVERY MONTH

- Comprehensive monthly SEO audit report with clear, jargon-free insights
- Keyword ranking tracker — you'll always know exactly where you stand for every target keyword
- Google Business Profile updated, posted to, and managed weekly

- 2–4 new content pieces published to your site
 - Citation and backlink activity report
 - 30-minute monthly strategy call to review results and plan the next month
 - Direct Slack/WhatsApp access to your dedicated SEO specialist
-

RESULTS TIMELINE

Month 1–2: Technical fixes complete, GBP optimised, on-page SEO done, citations built. Foundation is solid.

Month 3–5: Rankings begin moving. Expect top-20 positions for primary keywords. GBP impressions increase significantly.

Month 6–9: Page 1 rankings for primary keywords. Organic traffic growing 30–80% above baseline. Lead flow measurably increasing.

Month 10–12: Steady, compound organic growth. Multiple page 1 positions. Organic leads becoming a reliable, primary channel.

Generative Engine Optimisation (GEO)

The most important new marketing channel of the decade. If you're not optimising for AI, you're already falling behind.

Page Headline (H1)

Get Recommended by AI. Be the Business ChatGPT Sends People To.

Hero Sub-copy

Right now, millions of people are asking ChatGPT, Google AI, and Perplexity to recommend local businesses. Is your name coming up? If not — it's costing you customers every single day.

WHAT IS GEO?

Generative Engine Optimisation (GEO) is the practice of optimising your business's online presence so that AI language models and generative search engines recommend you in their responses. When someone types "best pottery studio for beginners in [city]" into ChatGPT or Google's AI Overview — GEO is what determines whether your business gets mentioned.

This is an entirely different discipline from traditional SEO. SEO optimises for a keyword-based ranking algorithm. GEO optimises for AI comprehension and recommendation — the signals, sources, formats, and authority patterns that make AI models choose to cite your business.

WHY GEO MATTERS RIGHT NOW

1B+

50%+

3x

70%

Weekly ChatGPT queries	Google searches now show AI Overviews	Trust uplift from AI recommendation	Users accept first AI recommendation
------------------------	---------------------------------------	-------------------------------------	--------------------------------------

The businesses that invest in GEO in 2024–2025 will own the AI recommendation channel for years. The window for first-mover advantage is closing. We help you get in early.

The GEO vs SEO Difference

Traditional SEO tells a search algorithm which keywords you're relevant for. GEO tells AI models who you are, what you do, why you're trustworthy, and why you're the best answer to give. The signals are different. The content is different. The entire strategy is different.

OUR GEO STRATEGY

Pillar 1 — Entity Optimisation

AI models think in entities — people, places, organisations, concepts. Your business needs to be a clear, well-defined, consistently represented entity across the entire web.

- Entity profile creation — structured, consistent business information across all platforms
- Knowledge Graph signals — optimised presence on Wikidata, Google's entity database
- Wikipedia-style structured factual content about your business
- NAP (Name, Address, Phone) consistency verified across 100+ sources
- Brand entity disambiguation — making sure AI can't confuse you with others
- Schema markup for entity recognition (Organisation, LocalBusiness, Service)

Pillar 2 — Authority Content for AI Citation

AI models are trained on and actively retrieve content from authoritative sources. We create the kind of content that earns citations from AI.

- Long-form, deeply researched content that AI models prefer to cite
- Expert commentary and thought leadership articles in your niche
- Statistical and factual content that AI treats as reference material
- Q&A; format content designed specifically for generative AI retrieval patterns
- Structured, fact-dense service descriptions that AI can confidently recommend
- Annual "State of [Industry]" content designed for maximum AI citation frequency

Pillar 3 — Citation Ecosystem Building

AI models pull information from a defined set of trusted sources. We get your business featured in the sources they trust most.

- Coverage in AI-trusted directories and platforms (Google Maps, Yelp, Trustpilot, etc.)
- Placements in local news publications and community websites
- Industry-specific publication mentions (dance, arts, fitness industry sites)
- Review volume and velocity management on platforms AI actively reads
- Syndication of content to high-authority domains
- Third-party brand mentions monitored and amplified

Pillar 4 — AI Platform Presence Management

We actively monitor and optimise your visibility across every major AI platform, adapting our strategy as each platform evolves.

- Google AI Overview (AI Overviews appear on 50%+ of searches — we make sure you're in them)
- Bing Copilot presence optimisation
- Perplexity AI featured result targeting
- ChatGPT web-browsing visibility (Browsing Plugin)
- Google SGE (Search Generative Experience) optimisation
- Monthly AI platform audit across 6 major systems

Pillar 5 — Brand Mention & Sentiment Strategy

- Monitoring all AI-readable brand mentions across the web
- Building positive brand associations with high-intent search terms
- Reputation management across AI-cited review platforms
- Ensuring consistent positive sentiment in sources AI models read

WHAT YOU GET EVERY MONTH

- GEO audit — how often are AI models mentioning you? (across 6 platforms)
- Monthly AI Visibility Report — benchmarked against your top 3 competitors
- New GEO content published — designed for AI citation
- Entity profile maintenance across all key platforms

- AI platform algorithm update tracking and strategy adjustments
- 30-minute monthly strategy call

Answer Engine Optimisation (AEO)

Win the answer box. Dominate voice search. Be the first result people see — before they even click.

Page Headline (H1)

Be the Answer. Win Before the Click.

Hero Sub-copy

When someone asks a question about your services — online or through voice — AEO makes your business the definitive answer. Featured snippets. People Also Ask boxes. Voice results. AI-cited responses. We own them all.

WHAT IS AEO?

Answer Engine Optimisation (AEO) is the discipline of structuring your content to directly answer the specific questions your potential customers are asking — so you earn position zero (featured snippets), voice search results, and AI-generated answers that appear at the very top of the search experience.

Where traditional SEO is about ranking in the list of 10 blue links, AEO is about leapfrogging that list entirely. When Google decides to show an answer box, a "People Also Ask" result, or a voice response — AEO puts your content in that position.

WHY AEO IS CRITICAL FOR LOCAL SERVICE BUSINESSES

35%

50%+

40%

100%

Avg CTR for featured snippets	Voice searches are questions	Users skip all links if answered	AEO feeds into GEO content too
-------------------------------	------------------------------	----------------------------------	--------------------------------

- Voice search is growing — Google Assistant, Siri, and Alexa pull almost exclusively from featured snippets
- Featured snippets build massive trust before a single click happens
- AI tools like ChatGPT and Gemini heavily cite content that is structured for answers
- AEO content works double duty — it also powers your GEO strategy
- Competitors rarely invest in AEO, creating a significant first-mover opportunity

OUR AEO STRATEGY

Step 1 — Question Research & Answer Architecture

Every AEO campaign starts with understanding exactly what questions your potential customers are asking at every stage of their journey.

- Mine 500+ customer questions from Google PAA, AnswerThePublic, SEMrush, and keyword tools
- Map every question to a buyer journey stage (Awareness → Consideration → Decision)
- Prioritise by search volume, ranking difficulty, and conversion potential
- Identify "quick wins" — questions you're almost answering but not yet winning
- Build your full Answer Architecture: a master document of every question and its ideal answer format

Step 2 — Structured Answer Content Creation

- FAQ pages structured with direct, concise answers in the first 40–60 words (the "snippet bait" zone)
- "How To" content with numbered steps — Google's most-featured format for instructional queries
- "What is [X]" definition pages for industry terms customers search
- Comparison content ("X vs Y") answering decision-stage questions
- "Best [X] in [City]" structured pages targeting recommendation queries
- Tables, lists, and definition boxes formatted specifically for featured snippet capture

Step 3 — Schema Markup Implementation

Schema markup is the language that tells Google and AI systems exactly what your content means — not just what it says.

- **FAQPage schema** — Tells Google directly which content is questions and answers
- **HowTo schema** — Marks up step-by-step content for visual rich results
- **Speakable schema** — Tells voice assistants which content to read aloud — essential for Alexa and Google Home
- **QAPage schema** — For community-style Q&A; content
- **LocalBusiness + Service combo schema** — The foundation for local and AI recommendations
- **Review + AggregateRating schema** — Shows star ratings in search results

Step 4 — Voice Search Optimisation

- Conversational keyword targeting — how people speak vs how they type
- Near-me + location + intent phrase optimisation ("yoga classes open Saturday near me")
- Short, direct answer formatting in the first paragraph of every page
- Site speed optimisation (voice assistants heavily favour fast-loading sites)
- Mobile-first UX optimisation (most voice searches happen on mobile)

Step 5 — AI Answer Optimisation

- Content structured to be naturally cited by ChatGPT, Gemini, and Perplexity
- Concise, factual answers in the first 100 words of each section
- Content that passes AI "quality" signals: depth, originality, factual accuracy
- Cross-linking AEO content with GEO content for maximum AI visibility synergy

WHAT YOU GET

- 50+ question-answer content pieces published per year
- Full FAQ section built with FAQPage and HowTo schema
- Featured snippet tracking dashboard — see every query you're winning
- Voice search readiness audit and report
- Monthly AEO performance review — new wins, losses, and opportunities
- Ongoing question mining as new queries emerge in your market

Website Creation

Not just a website. A high-performance lead generation machine built for local service businesses.

Page Headline (H1)

Websites That Don't Just Look Good — They Work.

Hero Sub-copy

Your website is your most important salesperson. It works 24 hours a day, 7 days a week, representing your business to every potential customer who looks you up. Most local business websites fail that job completely. Ours don't.

THE PROBLEM WITH MOST LOCAL BUSINESS WEBSITES

Walk through the websites of your top 5 local competitors. What do you find? Slow load times. Outdated designs. No mobile optimisation. Generic copy that doesn't actually say anything. Contact forms that no one checks. No call to action. No booking integration. No SEO structure. No chatbot.

Most of these sites were built by a friend, a nephew, or a cheap freelancer with a WordPress template and no understanding of conversion, SEO, or user psychology. They "exist" online, but they actively lose customers rather than capturing them.

Our Build Philosophy

We don't start with design. We start with your business goals. What does a visitor need to see, feel, and do to become a customer? Every design and copy decision flows from that question. The result is a site that looks exceptional AND converts at every touchpoint.

WHAT WE BUILD

For local service businesses, we build custom, high-performance websites that include every element needed to rank, convert, and grow:

- Multi-page service websites (5–20+ pages depending on package)
- Individual optimised service pages for every offering
- Class schedule and booking integration (Cal.com or your existing system)
- Portfolio and gallery sections with lightbox functionality
- Testimonial and review showcase pages
- About and team pages that build trust and connection
- Location pages for multi-area businesses
- Blog / content section for ongoing SEO content
- Contact pages with map, form, WhatsApp button, and social links
- AI chatbot integration (bundled with chatbot package)

OUR 4-PHASE BUILD PROCESS

Phase 1 — Discovery (Week 1)

- Intake form + 45-minute onboarding call
- Business goals, target customer profiles, and USP mapping
- Competitor analysis — we review your top 5 local competitors in detail
- Brand direction discussion — colours, feel, references you love
- Content gathering checklist — we tell you exactly what assets we need from you
- Sitemap finalised and approved before any design begins

Phase 2 — Design (Week 1–2)

- Mobile-first wireframes for all key pages
- Full design mockup with your branding applied
- Up to 2 design revision rounds included
- Colour, typography, and imagery selection
- Conversion element placement (CTAs, forms, trust badges)
- Approval sign-off before development begins

Phase 3 — Development (Week 2–3)

- Clean, fast-loading code — targeting 90+ on Google PageSpeed Insights
- Mobile-responsive on all devices and screen sizes
- Full SEO structure baked in from day one (meta tags, schema, sitemap, canonicals)
- Google Analytics 4 + Search Console setup and verification
- Conversion tracking — form submissions, button clicks, and calls tracked
- Contact forms with notification and CRM routing
- Social media link integration
- WhatsApp Business chat widget
- Cookie consent and privacy policy compliance

Phase 4 — Launch & Handoff (Week 3–4)

- Domain and hosting setup (or migration from existing provider)
- Full cross-browser testing (Chrome, Firefox, Safari, Edge)
- Device testing (iPhone, Android, iPad, desktop)
- Site speed final optimisation pass
- Pre-launch SEO checklist verification (14-point check)
- Training video — how to update content, add photos, post blogs yourself
- 30-day post-launch support included in all packages

TECHNICAL STACK

We build on modern, proven technology that balances performance, usability, and long-term maintainability:

- **CMS** — User-friendly content management — update text, images, and posts yourself without developer help
- **Hosting** — Fast, SSD-based hosting with CDN, targeting sub-2-second load times globally
- **SSL Certificate** — Included and managed — secure HTTPS on day one
- **Daily Backups** — Automated daily backups with one-click restore
- **Uptime Monitoring** — 99.9% uptime SLA with instant downtime alerts
- **Analytics** — Google Analytics 4 + Microsoft Clarity (heatmaps and session recordings)
- **Booking** — Cal.com integration for frictionless appointment booking
- **Chat** — Typebot + Flowise AI chatbot (if bundled)
- **Forms** — Smart forms with conditional logic, CRM sync, and email/WhatsApp notifications

AI Chatbot Infrastructure

Your most tireless, knowledgeable, and persuasive team member — available 24/7, on every platform.

Page Headline (H1)

Your Business, Working 24/7. Without Hiring Anyone New.

Hero Sub-copy

Your studio closes at 9 PM. The internet doesn't. Potential customers browse at 11 PM, wondering about your classes, your prices, your schedule. Without someone to answer — they move on. Our AI chatbots make sure that never happens again.

THE PROBLEM WE SOLVE

Local service businesses lose a staggering number of leads every day simply because no one is available to answer questions at the moment a potential customer has them. Think about how people actually make decisions: they browse at odd hours, they want instant answers, and if they don't get them, they move to the next option.

- 67% of customers prefer messaging to calling for business inquiries
- Response time under 5 minutes increases lead conversion by 9x vs responding within an hour
- The average business takes 47 hours to respond to a web inquiry — if they respond at all
- Voice-of-customer data shows "no one answered" is the #1 reason local leads go to competitors

WHAT OUR AI CHATBOTS DO

- Answer every question about your business instantly and accurately
- Qualify leads — are they local? What service do they need? Are they ready to book?
- Book appointments directly into your calendar (Cal.com integration)

- Send automatic confirmation and reminder messages
- Follow up automatically with leads who browsed but didn't book
- Capture contact info for your email or WhatsApp list
- Handle objections — price, schedule, experience level, and more
- Escalate complex queries to a human via WhatsApp with full conversation context
- Collect post-service feedback and generate review requests

OUR CHATBOT TECH STACK

We don't use cheap, off-the-shelf chatbot tools. We build on a powerful, integrated stack of best-in-class tools designed to deliver real AI conversations, not robotic scripts.

Typebot

The conversational flow engine. Typebot lets us design intelligent, branching conversation flows that feel natural and guide customers smoothly to the right outcome (enquiry, booking, or escalation).

Cal.com

Seamless calendar and booking integration. When the bot is ready to close the deal, Cal.com handles the appointment booking — live availability, instant confirmation, and calendar sync.

WATI (WhatsApp Business API)

The communication layer. WATI connects the chatbot to WhatsApp, the most-used messaging platform in India. Customers can chat on your website or WhatsApp — same intelligent bot, same seamless experience.

Flowise

The AI reasoning layer. Flowise allows us to build custom AI agents with memory, context, and decision-making capability. This is what separates our bots from basic FAQ bots.

Claude API (Anthropic)

The intelligence engine. We use Claude — widely regarded as the most thoughtful and nuanced AI assistant available — for the conversational AI layer. This is what makes our bots feel genuinely human.

USE CASES BY BUSINESS TYPE

Dance Studios

- "Which class is right for my 7-year-old?" — Bot asks age, experience, and interest, then recommends the perfect class
- "Do you have adult beginner sessions?" — Instant answer with schedule and booking link
- "I want to book a trial class for Saturday" — Bot checks Cal.com availability and books in 60 seconds
- Automated follow-up to trial attendees with special new-member offer

Art & Pottery Studios

- "What's included in the beginner pottery kit?" — Full kit description with photos
- "Can I book a private session for a birthday party?" — Bot collects requirements and passes to team
- "What are your current class schedules?" — Live schedule pulled from your booking system
- Post-class follow-up asking for review and promoting upcoming workshops

Yoga & Fitness Studios

- "I want to start but I've never worked out before — where do I start?" — Bot guides them to the right beginner programme
- "Book a free consultation with a trainer" — Instant Cal.com booking
- "What's the monthly membership cost?" — Full pricing breakdown with package comparison
- Reactivation campaigns for members who haven't booked in 30+ days

Tutoring Centers

- "Do you offer CBSE maths tutoring for Class 10?" — Subject/board/class mapping with immediate response
- "What are your batch timings?" — Live schedule by subject
- "I want a trial class this week" — Direct booking with tutor assignment
- Parent progress update messages via WhatsApp

WHY OUR CHATBOTS ARE DIFFERENT

Most chatbots feel like chatting with a broken vending machine. They misunderstand questions, give generic responses, and frustrate users into leaving. Ours are different for three fundamental reasons:

Real AI, Not Decision Trees

We use Claude API for the conversational layer — this means the bot understands context, handles unexpected questions, and responds naturally, not with rigid pre-programmed scripts.

Trained on Your Business

Before launch, we feed the bot everything about your business — your services, prices, schedule, FAQs, policies, personality. It knows your business as well as your best staff member.

Seamless Human Handoff

When a conversation needs a human, the bot escalates instantly to WhatsApp with full conversation context — your team picks up exactly where the bot left off, without the customer having to repeat themselves.

Pricing & Packages

Transparent, simple pricing designed for local service businesses. No hidden fees. No long lock-ins. Just clear value.

Every package includes onboarding, setup, a dedicated point of contact, and full monthly reporting. We're a partner, not a vendor.

MONTHLY RETAINER PLANS

All prices in INR. USD equivalents approx. based on current rates. Prices shown are starting rates — final pricing depends on scope and requirements.

BUNDLE DEALS

SEO + AEO Bundle [Save 15%] — SEO full programme + AEO content architecture billed together.

Website + Chatbot Bundle [Save 20%] — Website build + Standard AI chatbot build as one package.

Growth Launchpad [Save 25%] — 10-page website + Growth retainer for first 3 months at bundled rate.

Full Stack Launch [Save 30%] — Premium website + Scale retainer + Advanced chatbot as a single launch package.

Engagement Terms

3-month minimum commitment on all monthly retainer plans (enough time for us to show you real, measurable results). Month-to-month flexibility after the initial term. One-time projects have no ongoing commitment.

Frequently Asked Questions

Honest answers to the questions every potential client asks. Use this content verbatim on your FAQ page with FAQPage schema for AEO wins.

SEO & RANKINGS

Q: How long before I see results from SEO?

A: SEO is a long-term investment. Most clients see meaningful ranking improvements within 3–6 months. Local SEO (Google Business Profile, near-me rankings) often moves faster — we typically see measurable GBP improvements within 30–60 days of starting. After 9–12 months, SEO becomes a reliable, primary lead-generation channel.

Q: Can you guarantee first-page rankings?

A: No ethical agency can guarantee specific rankings — Google's algorithm is too complex and too frequently updated. What we can guarantee is that we'll use proven, white-hat techniques, produce high-quality work, and be fully transparent about what's working and what's not. Our track record speaks for itself.

Q: Will I lose my rankings if I stop paying?

A: Rankings earned through SEO are yours — they don't disappear the moment you stop a retainer the way paid ad traffic does. That said, SEO requires ongoing maintenance. Competitors are always active, and Google's algorithm evolves. Pausing entirely tends to erode rankings over 6–12 months.

Q: Do you work with businesses that already have some SEO done?

A: Absolutely. We start with a full audit regardless of prior work. Some businesses come with a strong foundation we can build on; others have had poor work done that we need to clean up first. Either way, we give you an honest picture before we start.

GEO & AI VISIBILITY

Q: What is GEO and how is it different from SEO?

A: SEO optimises for Google's traditional keyword-based ranking algorithm. GEO (Generative Engine Optimisation) optimises for AI assistants like ChatGPT, Google AI Overview, and Perplexity — so your business gets recommended when someone asks an AI for a local

suggestion. The content formats, signals, and strategies are fundamentally different. You need both.

Q: Can you really make my business show up in ChatGPT?

A: Yes — though it's not a simple on/off switch. AI models recommend businesses based on how well-represented and authoritative that business appears across the sources they pull from. We systematically build that representation through entity optimisation, authority content, and citation ecosystem development.

Q: How do you measure GEO success?

A: We track your appearance in AI Overviews on Google (the most measurable channel), monitor brand mentions across AI-readable sources, and run periodic test queries across ChatGPT, Perplexity, and Gemini to assess your visibility. We benchmark against your top 3 competitors every month.

WEBSITES

Q: Do I need a new website, or can you work with what I have?

A: We can work with an existing website in most cases. We'll start with a full audit and give you an honest recommendation — sometimes an optimisation is the right move, sometimes a rebuild delivers far better ROI. We'll always tell you which applies to your situation and why.

Q: Can I update the website myself after you build it?

A: Absolutely. We build on platforms designed for non-technical users. After launch, we send you a recorded training walkthrough covering how to update text, add images, publish blog posts, and make basic edits yourself. We're available for more complex updates at our standard hourly rate.

Q: How long does a website build take?

A: 14 days for a 5-page Starter Site, 21 days for a Growth Site, and 28–35 days for a Premium build. Timelines assume timely delivery of required content, images, and feedback from your side. Delays in content provision are the most common cause of timeline slippage.

AI CHATBOTS

Q: How does the AI chatbot actually work?

A: We build a conversational system using Typebot (for flow design), Flowise (for AI reasoning), the Claude API (for natural language intelligence), and Cal.com (for booking). The

bot is trained on your specific business — your services, prices, schedule, FAQs, and policies. It handles enquiries 24/7 and escalates to you on WhatsApp when needed.

Q: Can the chatbot book appointments?

A: Yes. We integrate directly with Cal.com or your existing booking system. The customer goes from question to confirmed, calendar-synced appointment without leaving the conversation. You receive a notification for every booking.

Q: Will the chatbot sound robotic?

A: Not with our stack. We use Claude API for the conversational layer — widely regarded as the most natural, contextually aware AI assistant available. Customers regularly don't realise they're talking to a bot. We also train it extensively on your brand voice.

Q: What platforms does the chatbot work on?

A: Your website (embedded widget) and WhatsApp (via WATI). Both run on the same underlying AI — the customer gets the same quality experience regardless of where they reach out from.

ENGAGEMENT & PROCESS

Q: Do I have to sign a long contract?

A: We ask for a 3-month initial commitment on retainer plans. This gives us enough runway to show you real, meaningful results — SEO especially needs time to deliver. After the initial 3 months, the engagement is month-to-month with 30-day notice to cancel.

Q: What do I need to provide to get started?

A: An onboarding call, your brand assets (logo, colours, fonts if you have them), photos of your space/team/work, and your content input (we provide a structured checklist). We handle the rest.

Q: What industries do you work with?

A: We specialise in local service businesses — dance studios, pottery and art studios, yoga and fitness centres, tutoring centres, salons and beauty studios, music schools, cooking schools, and similar. Our deep experience in this niche means faster results and fewer learning-curve costs for you.

Q: Can I speak to existing clients as references?

A: Yes, we can arrange reference calls with clients who've given permission to be contacted. We'll share their details after a discovery call and intent to work together.

Contact Page

The final conversion moment. Every word here should reduce friction and increase confidence.

Page Headline (H1)

Let's Build Something That Grows.

Sub-headline

Whether you're ready to get started or just want to understand what's possible for your business — book a free 30-minute discovery call. No pitch deck. No pressure. Just an honest conversation.

DISCOVERY CALL — WHAT TO EXPECT

Use this section to set expectations and reduce the anxiety of the first contact:

- 1. You tell us about your business** — What you do, who you serve, what's working, what's frustrating you about your digital presence.
- 2. We share what we see in your market** — A quick live look at your current rankings, your competitors' strengths, and where the biggest opportunities are.
- 3. We suggest a starting point** — Based on your goals and budget, we'll recommend where to begin — and be honest if we're not the right fit.
- 4. You decide what happens next** — There's no close, no hard sell. If it makes sense to work together, we'll send a proposal within 24 hours.

CONTACT FORM — FIELD STRUCTURE

Field	Type	Required?
Your Name	Text input	Required

Business Name	Text input	Required
Type of Business	Dropdown: Dance Studio / Art Studio / Yoga / Fitness / Tutoring / Salon / Other	Required
Website URL	Text input	Optional — "Leave blank if you don't have one yet"
Your Biggest Digital Challenge Right Now	Textarea (2–3 lines)	Required
How did you hear about us?	Dropdown: Google Search / Referred by / WhatsApp / Instagram / Cold Email / Other	Optional
Preferred Contact Method	Radio: Phone / WhatsApp / Email	Required
